Research Interests

Key words: medical image analysis, computer vision, deep learning, and machine learning.

My research interest is in the interdisciplinary field of medical data analysis, computer vision, and machine learning, aiming to create innovative intelligent systems that can support high-quality human/machine interactions and clinical decision-making.

Recently, I am dedicated to multi-modal learning with vision, text, audio, and gaze in ultrasound imaging, out-of-distribution generalization, learning with noisy labels. Previously, I focused on developing annotation-efficient deep learning solutions, such as data augmentation, semi-supervised learning, domain adaptation, learning with noisy labels, to achieve trustworthy and effective intelligent systems.
