RESEARCH INTERESTS

Key words: medical image analysis, computer vision, deep learning, and machine learning.

My research interest is in the interdisciplinary field of medical image analysis, computer vision, and machine learning, aiming to create innovative intelligent systems that can support the high-quality medical diagnosis and interventions. In the technical aspect, I mainly focus on developing *annotation-efficient deep learning* solutions to achieve trustworthy and effective intelligent systems.

Recently, I am dedicated to out-of-distribution generalization, learning with noisy labels, few-shot learning, and zero-shot learning. Previously, I studied topics of making adequate use of unlabeled data and augmenting the limited labeled data for data-efficient deep learning.
